

Legacy Product Management Services

Struggling with products near obsolescence?

Let us help you:

- ❖ Reduce manufacturing costs
- ❖ Focus on your current product lines
- ❖ Improve your balance sheet and inventory turnover
- ❖ Improve the response to your installed base and low-volume customers

Allow Embedded Automation to provide you another option for your legacy products. Embedded Automation offers a wide array of Legacy Product Management services to let you to concentrate on your current and future products. Consider us a virtual sustaining engineering, technical support or manufacturing department.

By managing numerous legacy products from multiple companies, Embedded Automation is able to provide a better cost alternative, in many cases, than retaining in-house expertise or outsourcing to foreign countries. Our engineers and technicians understand how to sustain products, manage your intellectual property and provide quick technical support.

Embedded Automation provides:

- ❖ Guaranteed price and availability of your products (per annual basis)
- ❖ Sustaining engineering services
 - Parts obsolescence management
 - Maintenance engineering - hardware, mechanical and software
 - Product testing and compliance testing
- ❖ Low-volume, high-mix manufacturing environment
- ❖ Product repair, technical support and field service
